Application/Control Number: 10/511,670

Art Unit: 3651

Applicant's election with traverse of Group II, claims 7-24 in the reply filed on 10/30/2006 is acknowledged. The traversal is on the ground(s) that because there was no lack of unity in the previous PCT application there can be no restriction in this case. The Examiner is not bound by a previous finding in another case. Metal forming is not part of class 198 and will be not examined by an Examiner who works in conveyors

The requirement is still deemed proper and is therefore made FINAL.

Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

The disclosure is objected to because of the following informalities: The references to the claims should be deleted as the specification should not find its support in the claims.

Appropriate correction is required.

Claims 15-24 are objected to under 37 CFR 1.75(c) as being in improper form because a multiple dependent claim should refer back in the alternate only and/or not depend from another multiple dependent claim. See MPEP § 608.01(n). Accordingly, the claims 15-24 have not been further treated on the merits.

Art Unit: 3651

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 7 and 12/7 are rejected under 35 U.S.C. 102(e) as being anticipated by Koeda et al. (U.S. Patent Application Publication 2004/0011628).

Koedal et al. show in Figure 1 a metal sheet for a curve having a flange 2, a central piece and a set of slots 5 which run from the edge of the flange 2 to the central piece.

Re claim 12/7, the flange and the central piece are joined in a transition area.

Claims 8-11, 12/8-11, 13 and 14 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Cited are curved frames formed from bending blanks.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to James R. Bidwell whose telephone number is (571)272-6910.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Gene O. Crawford, can be reached on 571-272-6911. The fax phone
